Where on the Moon: Past, Present and Future

Where’s a place that everyone can see from their backyard, but only 12 men have gone? Despite the desire among scientists and engineers all over the world to return to the moon, no one has done it...yet.

Site scores are based on potential resources such as hydrogen and oxygen, distance from geologic features and amount of radioactive elements at each site. The site grid is overlain on a USGS geologic map.

Potential Lunar Base Site Score
